

Feature 751: Interaction Submatrix

Eigenvalue Spectrum (AND-score: 0.96)

EXAMPLE SENTENCES

The circuit (Feature 751) activates when features from BOTH input clusters are present.

Expected activation patterns:

- "Despite problems, it was wonderful" -> HIGH
- "It was wonderful" (only positive) -> LOW
- "There are problems" (only negative) -> LOW
- "The cat sat on the mat" (neutral) -> LOW

Note: Full per-word activation heatmaps require running the model at inference time. See archived scripts for implementation.

INPUT CLUSTER SUMMARY

Cluster A (3 features):

Features: [5212, 7655, 253]
(positive v1 projection)

Cluster B (12 features):

Features: [6921, 6993, 682, 1358, 6051]...
(negative v1 projection)

AND-gate Behavior:

Output activates when BOTH
Cluster A AND Cluster B
features are present.
